

Emergency Egress Window System (EEWS)

OSG's innovative energized EEWS solution offers the greatest survivability

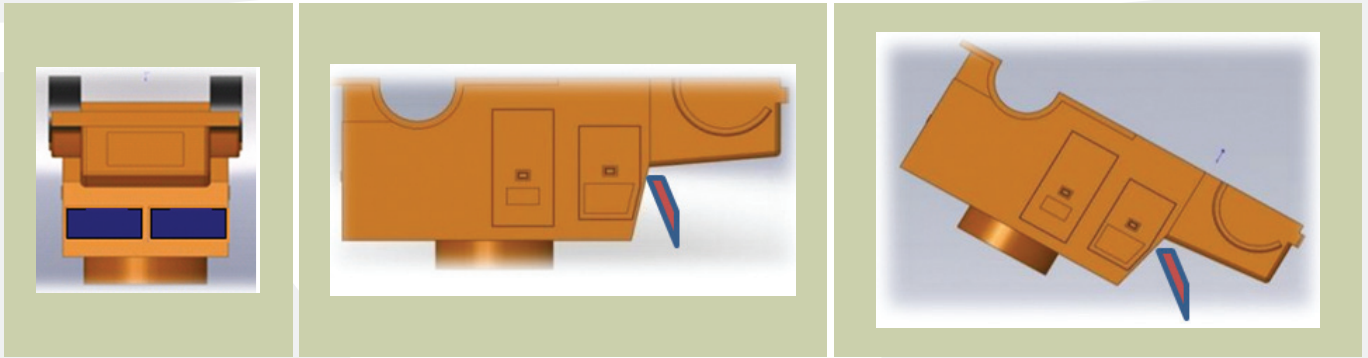

Our solution provides the greatest facility for occupants to exit a vehicle when doors are blocked due to blast, rollover or other catastrophic event.

Simple maintenance and operation:

- Window remains secure when emergency egress is not required
- Functions quickly and easily when needed
- Because of energized design, even seriously injured or disoriented occupants can operate the unit

OSG's EEWS solution operates efficiently regardless of vehicle position, offering egress route when doors are blocked.

Key features & benefits

- Can be designed / adapted for any platform, any vehicle, new or existing
- Adaptable to any ballistic threat level
- Fast, easy one-handed operation
- Operable even by injured occupants
- Performs efficiently regardless of vehicle position
- No special tools required
- Window remains secure until egress is required
- Can be modified to fit windshield, door or body windows
- Proven solution: meets all ATPD 2352 requirements
- Cost-effective
- Fully tested & proven design: blast, environmental & field tests performed. Complete data available on request.
